Using This Guide

Use this guide to improve your understanding of how to license Microsoft Dynamics 365 Business Central 365 on-premises under the Perpetual Licensing or the Subscription Licensing model. Dynamics 365 Business Central, on-premises fits the needs of midsize businesses with core business needs. It helps organizations connect their financials, sales, purchase, inventory, projects, service, and operations.

This document applies for users with Dynamics 365 Business Central licenses and does not supersede or replace any of the legal documentation covering use rights. For brevity and ease of reading, the Dynamics 365 Business Central application names are shortened, to exclude "Dynamics 365". For a complete list of the Dynamics 365 Business Central applications by branded name refer to <u>Appendix B</u>.

For help determining the right technology solution for any given organization, including the license requirements for a specific product or scenario, consult with your Microsoft Dynamics Certified Partner.

This guide does not supersede or replace any of the legal documentation covering use rights for Microsoft products. Specific product license terms are detailed in the Software License Terms (SLT) document, which is available at https://go.microsoft.com/fwlink/?linkid=2009120&clcid=0x409.

An important distinction to make is between license keys (activation keys) and license entitlements. License keys activate the Microsoft Dynamics software. License entitlements are what customers are entitled to run, and use based on the licenses acquired as described in the SLT.

This document does not apply to Microsoft Dynamics AX, Microsoft Dynamics GP, Microsoft Dynamics NAV, Microsoft Dynamics SL, Microsoft Dynamics 365 for Operations, on-premises, or Microsoft Dynamics 365 (On-Premises). This guide is not intended to influence the choice of Microsoft Dynamics products and services. The examples presented in this guide are illustrative. Microsoft Corporation reserves the right to review and/or update the existing version of this document without any advance notice.

How to buy Business Central, on-premises

Licensing Programs

Business Central, on-premises licenses are only available through the Dynamics Price List (DPL) and licensed through one of two licensing models: Perpetual Licensing and Subscription Licensing:

• **Perpetual Licensing:** software is licensed with permanent usage rights. Customers may use the licensed version of the software for as long as they choose. Perpetual Licensing is an option if customers prefer an upfront investment or want to manage their solution internally, and will run the software on their premises (or, subject to license mobility rights, have it hosted by a third party Infrastructure as a Service [IaaS] provider acting as their agent).

• Subscription Licensing: license the use of software with non-perpetual rights, meaning customer can use the software only during the term of the agreement secured by periodic payments. This model lowers initial licensing costs and provides customers with the flexibility to increase or decrease subscription license counts from one subscription term to the next. Subscription Licensing can be used when customers want to have their ERP solution hosted and managed as Software as a Service (SaaS) by their partner or any third party. Alternatively, the software may be deployed on their premises, provided that their Business Central, on-premises partner provides day-to-day management services and maintains sole control over the solution.

There are significant licensing differences between Perpetual Licensing and Subscription Licensing, as illustrated below.

	Perpetual	Subscription
Self-managed, on-premises deployment	√	
Self-managed, hosted deployment (laaS)*	√	
Partner-managed, on-premises deployment		\checkmark
Partner-managed, partner-hosted deployment (SaaS)		\checkmark
Own your licenses	√	
Lease your licenses		\checkmark
Per User access licenses	√	\checkmark

*Requires an active enhancement Plan

International Availability

Country, language, and localization availability for Business Central, on-premises is available here.

How to License Business Central, on-premises

Licensing Overview

Business Central, on-premises applications are assigned licenses that are dedicated to a named user or device. Business Central, on-premises offers two types of access licenses: <u>Named Client Access Licenses</u> (<u>CALs</u>), only available under the Perpetual Licensing model, and <u>User Subscription Access Licenses (SALs</u>), only available under the Subscription Licensing model.

Perpetual Licensing

With Perpetual Licensing, you license the desired solution functionality and access to that functionality is secured by licensing access licenses.

It is easy for small and midsize businesses to get quickly and affordably started with Perpetual Licensing. The Essentials user gives customers all setup utilities, provides usage rights to core financial, sales and opportunity, supply chain and inventory, and project management functionalities. The Premium user include everything in the Essentials user, plus service management and manufacturing.

Under Perpetual Licensing, customers license full access to the solution with full named CALs and limited access to the solution with Team Members and Device CALs. When assigning security rights to users, the system administrator will designate each user as a full, Team Members, or a device user.

Note, Essentials and Premium users may not be mixed and matched. Customers must license Essentials or Premium users but not both. Customers may move their users from Essentials to Premium if they move all users at one time. Contact your ROC for more information.

Customers must acquire and assign an access license to each user that accesses the ERP solution directly or indirectly.

Deploying a Self-Managed Solution in an IaaS Environment

Customers with an active enhancement plan have the licensing flexibility needed to manage their own solution, but deploy it in an IaaS environment, such a Microsoft Azure. Through the License Mobility rights included with the enhancement plan, customers may reassign their ERP solution licenses to:

- Any servers running physical operating system environments (OSEs) or virtual OSEs dedicated to the customer and located within the same Server Farm as often as needed, or
- From one Server Farm to another, but not on a short-term basis (i.e., not within 90 days of the last assignment).

Business Central, on-premises may be deployed in a multitenant environment where, by definition, the OSE is not dedicated to the customer. In such case, customers are required to install their license key in the tenant database. This exception to the license mobility requirement that the OSE be dedicated to the customer only applies to the Business Central, on-premises software and not to any of the other Microsoft components required for their ERP solution to run.

SQL Server Runtime use licenses, received via Order Central, do not qualify for license mobility rights. If deploying the ERP solution in an IaaS environment, customers will be required to license SQL through other licensing programs.

"Server Farm" means a single data center or two data centers each physically located:

- In a time zone that is within four hours of the local time zone of the other (Coordinated Universal Time (UTC) and not DST), and/or
- Within the European Union (EU) and/or European Free Trade Association (EFTA).

Subscription Licensing

With Subscription Licensing, customers subscribe to the rights to use Microsoft software and services instead of owning them. Subscription licensing are full month terms that may be cancelled at the end of the term without penalties.

To choose the appropriate SAL type, determine the functionality you require for the ERP solution. If you require only the functionality included with the Essentials user, license the Essentials user SALs (or a combination of the Essentials User, Team Members user and/or device SALs). If you require the functionality of the Premium user, then license the Premium user SALs (or a combination of the Premium user and/or device SALs).

Assigned Licenses

Assigned licenses provide a named user or dedicated shared device with access to applications.

Full User Access Licenses

Full users are the users whose work requires use of the feature rich business applications functionality.

• **Full users**: receive unrestricted direct or indirect access to all of the functionality in the licensed server software including setting-up, administering, and managing all parameters or functional

processes across the ERP Solution. Full users perform tasks across the ERP Solution using all the functionality included with either the Essentials or Premium user and require more write capabilities that those available to Team Members. Every Essentials user requires a Essentials user license, and every Premium user requires a Premium user license.

Additional User Access Licenses

Additional users often represent a large percentage of users in an organization and may consume data or reports from line of business systems, complete light tasks like time or expense entry or be heavier users of the system, but not require full user capabilities.

• <u>Device</u>: grants access to Business Central, on-premises from a device. Any user may access a licensed device without the need for a separate user CAL. The Device CAL has restricted functionality but may make more economic and administrative sense if its organization has employees who share devices, such as for shift-based work.

A user or device licensed with a CAL may access any number of instances of Business Central, onpremises Server or earlier versions of the software running on the organization's servers. Note: Since Business Central, on-premises may be licensed with a user or device CAL, only the user or device requires a CAL but not both. If the user of a device is licensed with a CAL, then the device does not need a device CAL. Likewise, if the device is licensed with a device CAL, then the user does not need a CAL. Customers can mix both user and device CALs.

 <u>Team Members</u>: significant percentage of users in an organization and may consume data or reports from line of business systems, complete light tasks but don't require full user capabilities. The Team Members license entitles the user to perform Team Members user tasks across the ERP Solution using the same functionality footprint available to the Essentials and Premium users. Every Team Members user requires a Team Members user license.

Assigned Application Licensing

With Business Central, on-premises, you must license at least one of Essentials or Premium users. Additional access to the service functionality by other users is licensed with Team Members. Business Central functionality is delivered through the Essentials or Premium User.

Business Central Essentials

For more sophisticated processes, yet simple enough to be managed in one solution, Essentials provides:

(i) Financial management

- (iii) Supply chain and inventory management
- (ii) Sales and opportunity management
- (iv) Project management

Business Central Essentials Functionality

Financial Management			
Basic General Ledger	Budgets	Fixed Assets	
Account Schedules	Cash Flow Forecast	Multiple Currencies

³Requires Dynamics 365 license

⁴Support for Sales Tax or VAT depending on country deployment

Business Central Premium

Premium includes Essentials capabilities and adds key functionality for manufacturing and service order management:

- (i) Service management
- (ii) Manufacturing

Business Central Premium Functionality

Service Order Management		
Service Order Management	Service Item Management	Planning and Dispatching
Service Price Management	Service Price Management Service Contract Management	
Manufacturing		
Production Orders	Basic Supply Planning	Finite Loading
Production Bill of Materials Demand Forecasting Sales and Inventory Forecasting		Sales and Inventory Forecasting
Version Management	Basic Capacity Planning	Agile Manufacturing
Machine Centers		

Business Central, on-premises per named user license provides users with unrestricted access to the functionality included in Business Central, on-premises Team Members and full user license.

Essentials and Premium licenses include:

- 1 license for an External Accountant user
- 1 license for a System Administrator user

External Accountant licenses are for the sole purpose of providing supplemental professional accounting or bookkeeping services related to the auditing process. System Administrator license is for an employee of your Microsoft Dynamics partner to manage your application and provide support.

Note: Licenses for additional software required to run the solution, such as Microsoft Windows Server, Microsoft SQL Server, and Microsoft SharePoint Server, are not included with the Essentials, the Premium, or the Team Members licenses. You need to license any additional software according to their applicable license terms. See <u>Licenses</u> for Additional Software for more information.

Configuration Components

Configuration components are included for both Essentials and Premium users. Additional configuration components are available for purchase as needed.

Configuration and Development		
Application Builder ⁺	Pages (100 pages)	XML Port (100 XML Ports)
Solution Developer ⁺	Reports (100 reports)	Queries (100 queries)
Table (10 tables)	Codeunits (100 codeunits)	

⁺Not available in Subscription

Cross Application Licensing

Assigned Access Licenses

Device License

The **Business Central Device** license is a limited license with a subset of Business Central capabilities. This device allows multiple users to use a licensed device to operate a point of sale device, shop floor device, or warehouse device. A single device can provide any of the following functionality in any combination. Device CALs do not include all the capabilities of the full user.

Device SL	Operations – Device and Business Central Device Functionality
Point of Sale	One device located in the Commerce location, used by any individual, for completing customer facing sales of goods or services transactions
Store Manager	 One device located in the Commerce location, used by any individual, dedicated to performing the following tasks solely for that Commerce location. Commerce location or Store means a physical location (static or itinerant) operated by you when closing goods or services transactions with customers: Managing and replenishing inventory Balancing cash registers and processing daily receipts Configuring and maintaining menu options displayed by the ISV Devices Purchasing supplies and services required to run the Commerce Location operations Managing Commerce Location staff Processing reports required to analyze and manage Commerce Location results Managing master data related to Commerce Location operations
Shop Floor	 One device used for manufacturing shop-floor functions. Shop Floor Functions: Clock-in and clock-out Starting and finishing production jobs (including project activities carried out on the shop floor) Reporting progress Materials consumption and completion Viewing documents and instructions related to production jobs Viewing worker holiday balances
Warehouse Device	 One device used for Warehousing functions: Receiving Putting-away Doing internal stock transfers Picking, packing Capturing product attributes Shipping goods plus performing inventory count checks in the context of a warehouse management system Posting output and materials consumption against production orders when captured as transfers of raw materials and finished goods between a warehouse and a production line (all other types of transactions are excluded)

Team Members License

The Team Members license is a license designed for users who are not tied to a particular function, but who require basic Business Central, on-premises functionality.

Team Members get restricted access to the ERP Solution to complete only the following tasks:

- 'Read' access to any data contained in the ERP solution; and
- 'Write' access to a maximum of 3 table objects

Team Members users are not authorized to 'write' directly or indirectly to the following tables:

Table Number	Table Name
17	General Ledge Entry
200000004	Permission Set
200000005	Permission
200000053	Access Control

Note, tables described in <u>Appendix A</u> do not count towards the 3 table objects.

Writing the transactions of a Team Members user to a temporary table then having a full user (or a system process) post those transactions to table 17 is an example of indirect write access to table 17, which is not permitted.

Transactions created by a Team Members user are not considered indirect write access if:

- The transaction is needed by a full user as in an input to perform their job function, and
- Transactions are processed individually (not in a batch).

The Team Members user included tables should allow you to perform the following tasks:

Sales

- (i) Create a customer with relevant contact details, based on a template or from scratch
- (ii) Create an opportunity for an existing campaign, and relate it to sales quotes or orders

Торіс	Task
Quarters	Create a sales quote for an existing or a new customer
Quotes	Send a sales quote by email, send it for approval, or convert it to a sales order
Ordona	Create a sales order for an existing or a new customer
Orders	Send a sales order for approval

Purchase

- (i) Create a vendor with relevant contact details, based on a template or from scratch
- (ii) Create a purchase order for an existing or a new vendor
- (iii) Send a purchase order for approval

Other Tasks

- (i) Fill in an existing timesheet
- (ii) Perform document capture expense reporting by scanning an invoice to create an incoming document

Role Centers

(i) Use the charts on two role centers: order processor (for sales scenarios) and purchasing agent (for purchase scenarios)

However, if your specific deployment requires more than 3 tables not part of the included range to fulfill these tasks, a full user will be required. Any access beyond these limitations requires full user access.

When assigning security rights to users, the system administrator will designate them as full users, Team Members, or device users.

Additional Licensing Requirements

Minimum License Purchase Requirements

There are no minimum license purchase requirements. Note, customers may not mix and match Essentials and Premium users. Customers must license either Essentials or Premium users, not both.

Licensing Requirement for External Users

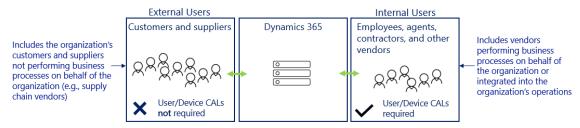

Your customers are external users. Essentials and Premium licenses include the rights for an unlimited number of external users to access the ERP solution without the need for individual Access Licenses as long as following two restrictions are met:

• External users cannot use any clients provided by the Business Central, on-premises, such as the Business Central, on-premises Windows client, the Business Central, on-premises Web client, the

Business Central, on-premises for Windows, the Business Central, on-premises for iPad or iPhone app, or the Business Central, on-premises for Android Tablet or Phone app.

• External user access does not extend to the customer or the customer's affiliate's contractors, vendors, or agents providing business processes on the customer's behalf or using Dynamics 365 to manage any portions of their business. In this sense, the customer may not use Dynamics 365 to provide business process outsourcing services to its clients.

Your system administrator designates external users in the user table by assigning such users an external user designation.

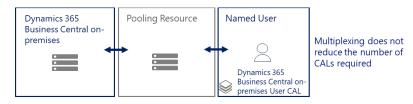

Multiplexing

Multiplexing refers to the use of hardware or software that a customer uses to pool connections, reroute information, or reduce the number of devices or users that directly access or use Business Central, on-premises Server. Multiplexing does <u>NOT</u> reduce the number of licenses of any type required to access the Business Central, on-premises Server. Any user or device that accesses Business Central, on-premises Server—whether directly or indirectly—must be properly licensed.

Business Central, on-premises licenses are required for users or devices that directly input, query, or view data from the Business Central, on-premises Server. Similarity, Business Central, on-premises licenses are required for users or devices that input data into, query, or view data from Business Central, on-premises Server through a pooling device. Pooled connections use a non-interactive user account in Business Central, on-premises that can access the system but only via the web service layer. Internal users and devices accessing Business Central, on-premises data indirectly through a portal or via an API to a separate software such Microsoft Outlook must also be properly licensed, regardless of if they are set up as a Business Central, on-premises user in the server software. For example:

- Internal users and devices access Business Central, on-premises data indirectly through a thirdparty application must still be properly licensed for Business Central, on-premises
- Users or devices that access the software files, data, or content provided by the product that is made available through an automated process require Business Central, on-premises licenses
- The number of tiers of hardware or software between the Business Central, on-premises Server and the users or devices that ultimately use data, software, or functionality does not affect the number of licenses required.

For additional information about multiplexing refer to the Microsoft Volume Licensing <u>Brief</u> Multiplexing-CAL Requirements. Note, multiplexing does not reduce the number of user licenses required.

Customizing the Business Central, on-premises Solution

A suite of tools is available to help partners customize your Business Central ,on-premises solution. Your partner may license application objects as needed to modify the solution to your specific requirements. If you are a larger customer with your own IT department, please ask your partner about Application Builder and Solution Developer, two functionality modules designed to give you the tools to modify your solution on your own.

Other Product Licenses

Microsoft Power BI in Dynamics 365

Business Central, on-premises users are not provided with any standalone or general-purpose Power BI license or use rights. Customers who require Power BI Pro will need to license and pay for it separately.

Business Central, on-premises include an option to embed Power BI content as a product feature but require users to subscribe to Power BI (free user or Power BI Pro depending on content) separately to configure access to this content. More details are available in <u>this article</u>.

Licenses for Additional Software

Licenses for other products required for the solution must be acquired separately in accordance with the applicable licensing requirements for these products.

Business Central, on-premises relies upon SQL Server as an enabling technology. Organizations must be properly licensed, by purchasing the SQL Server and SQL CALs separately from the Business Central, on-premises license, to access the Business Central solution. SQL Server and SQL CALs have their own license terms and conditions.

Licenses for additional software that may be required for the solution—such as Microsoft Windows Server and Microsoft SharePoint Server—and their corresponding Access Licenses are not included with the Business Central, on-premises license. You must acquire any necessary licenses for these additional products under the licensing model for the particular product (which may be different than the model used for Business Central, on-premises). To learn more or acquire licenses for additional software, find and contact a Microsoft Volume Licensing partner via: <u>https://www.microsoft.com/Licensing/how-to-buy/howto-buy.aspx</u>.

For more information about licensing Windows Server and SQL Server, refer to <u>https://www.microsoft.com/cloud-platform/default.aspx</u>.

Appendix A: Team Members Included Tables

The following tables do not count towards the maximum of three permitted for Team Members in Business Central, on-premises.

Table #	Table Name	Date Added
18	Customer	Oct 2018
	Cust. Invoice Disc.	Oct 2018

Appendix B: Dynamics 365 License List and Definitions

Dynamics 365 Licenses:	Written as:
Dynamics 365 Business Central Device	Device
Dynamics 365 Business Central Essentials	Essentials
Dynamics 365 Business Central Premium	Premium
Dynamics 365 Business Central Team Members	Team Members

Definitions:

Named CALs are assigned on a "named user" basis, meaning each user requires a separate user License; named user licenses cannot be shared but an individual with a named user license may access the service through multiple devices.

User SALs, only available in the subscription Licensing model, grant individual users the right to access the application irrespective of the number of users simultaneously accessing the application. Like named CALs, a unique user SAL must be assigned to each individual user that will access the solution functionality. SALs are specific to an individual and cannot be shared.
